

Test 015: Put a labeled figure/table inside a theorem/proof etc. but also have maths in the caption

Emma Cliffe, Skills Centre: MASH, University of Bath

September 2026

Contents

1	Here is a figure	3
2	Here is a figure with hyphen in the label	3
3	Here is the putting of a figure inside another built	

in environment	4
4 Here is the putting of a figure inside a newtheorem	6
5 Here is when we set width - and everything is different now	7
6 Where do hyphens break?	7

1 Here is a figure

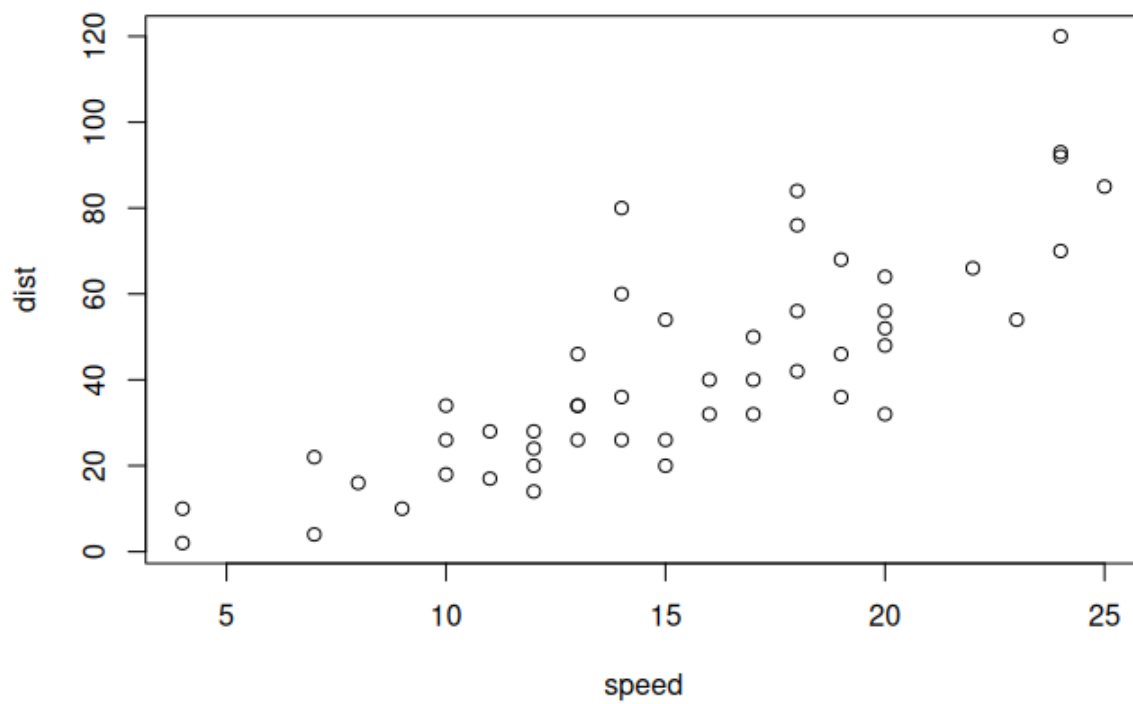

Figure 1: Something else to do with cars 1 $A \times B$

2 Here is a figure with hyphen in the label

Hyphens in figure labels works...

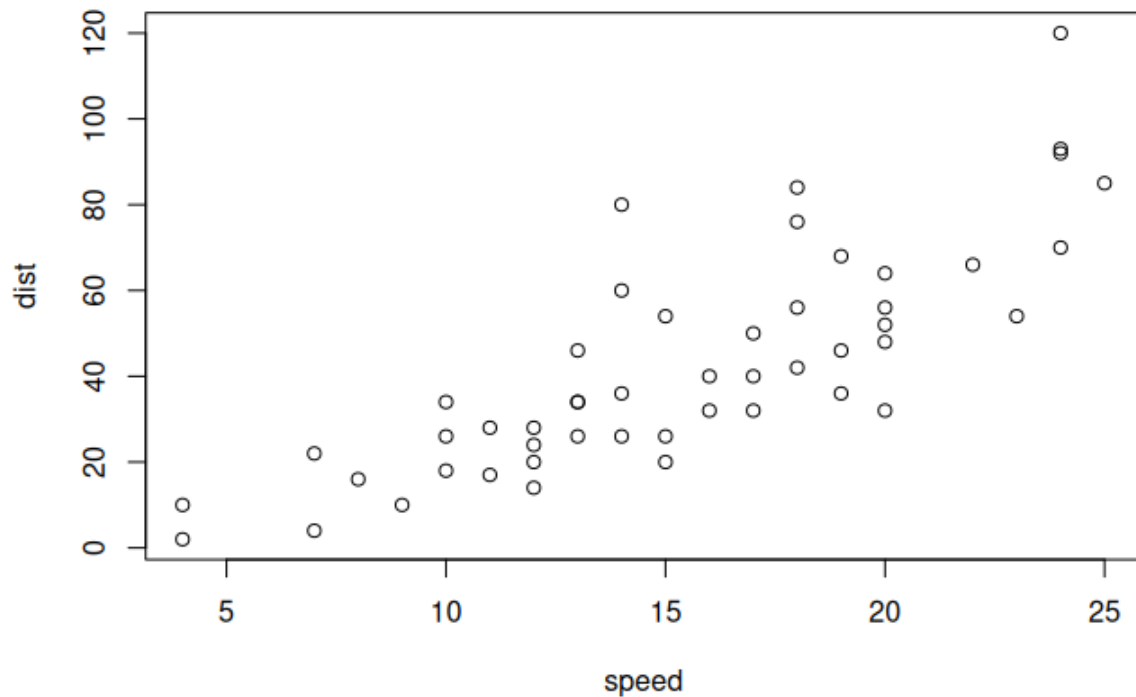

Figure 2: Something else to do with cars 1- $A \times B$

Here I am referencing the first figure 1 and second 2

3 Here is the putting of a figure inside another built in environment

Example 3.1.

Here is an example.

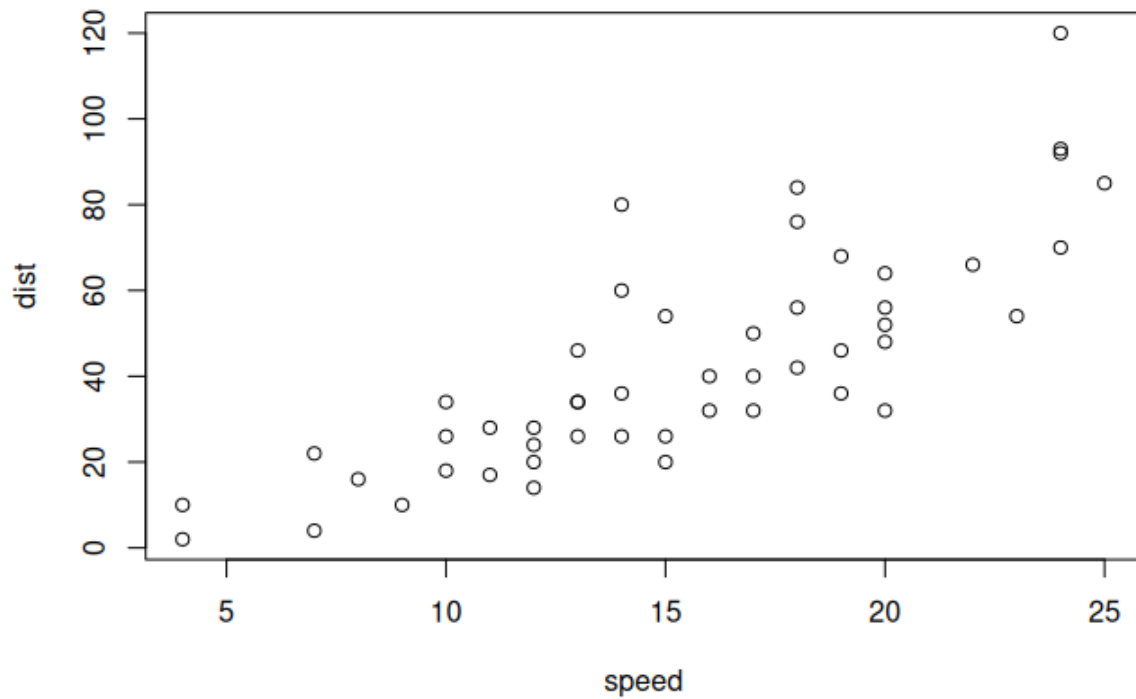

Figure 3: Something to do with cars 2

This is a test. So, you need an empty line before and after the above for it to be a float. At the end of an environment this means that you need TWO empty lines. This is Pandoc.

4 Here is the putting of a figure inside a newtheorem

Example 4.1.

An example

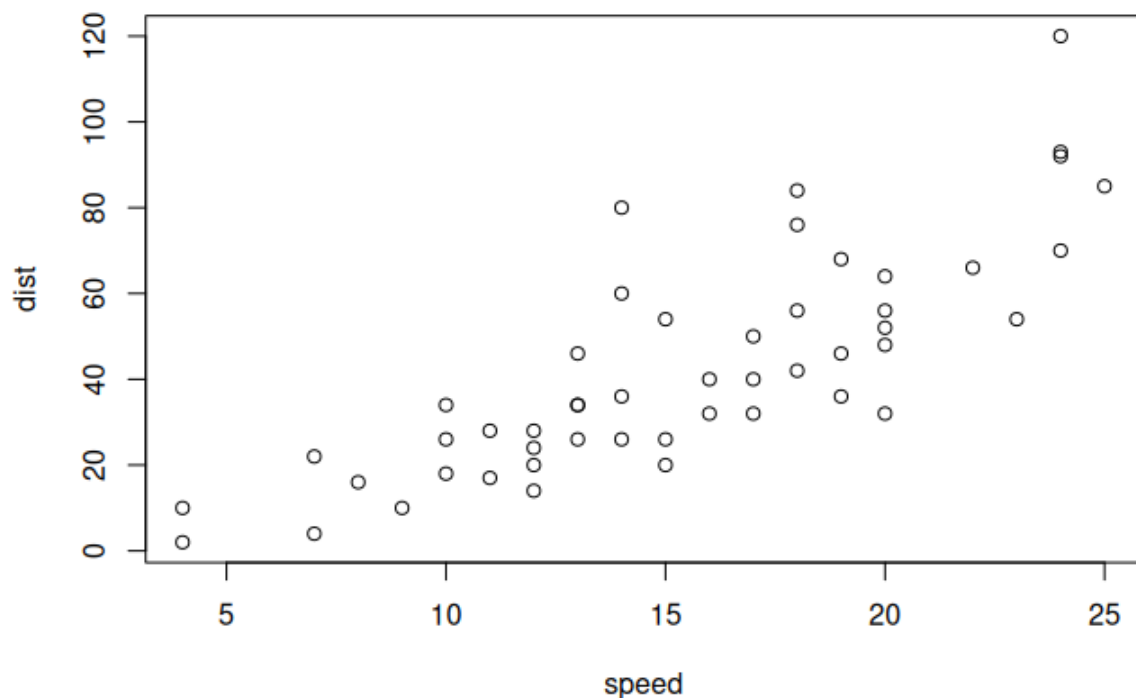

Figure 4: Something to do with cars 3

Here I reference that theorem 4.1

5 Here is when we set width - and everything is different now

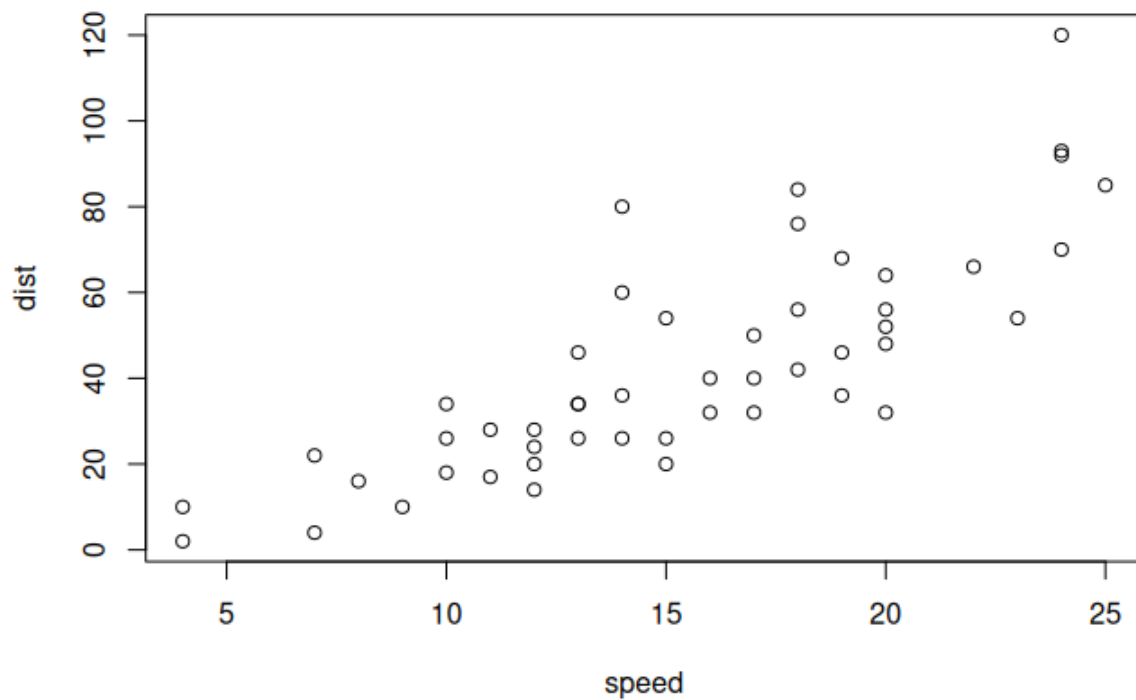

Figure 5: Something else to do with cars 4

6 Where do hyphens break?

They only break in newtheorem, not inbuilt, not figures

Example 6.1.

Here is a final example.

Here I reference that last theorem 6.1

Example 6.2.

The broken one.

Here I reference the broken one 6.2

Nugget 6.1.

The good one.

Here I reference the good one 6.1

Nugget 6.2.

The good one bad.

Here I reference the good one bad 6.2
